

Bobathon Grid Optimiser

Demand Spike Forecasting · Anomaly Detection · Operator Briefs with Bob AI

TEAM VRAM

15 SEPTEMBER 2026

The Problem: Grid Operators Are Flying Blind

Unpredictable Renewable Output

Solar and wind variability creates gaps in supply that are hard to anticipate

Sudden Demand Spikes

Rapid load changes strain the grid before operators can respond

Fragmented Signals

Telemetry, forecasts, and alerts live in separate systems – no unified view

⚠ **Impact:** Increased curtailment, load-shedding risk, and costly manual triage.

The Solution: End-to-End Pipeline

Raw grid telemetry flows through forecasting, anomaly detection, and optimization – then Bob AI generates a plain-language operator brief, all surfaced on a unified dashboard.

Each stage builds on the last – from raw signal to operator-ready decision support.

System Architecture

The pipeline is orchestrated through a **FastAPI backend** (`app.py`) that manages real-time telemetry via WebSocket, coordinates model inference, and persists trained models for low-latency serving.

Live Demo: Dashboard Walkthrough

1

Connect

Link real-time telemetry feed

2

Forecast

View predicted demand curve

3

Detect

Anomalies flagged automatically

4

Recommend

Optimizer suggests actions

5

Bob Brief

Plain-language operator summary

Bob AI: Operator Briefs That Explain Themselves

Bob AI translates model outputs into **actionable operator briefs** – explaining what happened, why it matters, and what to do next.

→ **Contextual Explanations**
Briefs reference specific anomalies and forecast deviations

→ **Prioritized Actions**
Recommendations ranked by urgency and impact

→ **Resilient Integration**
Fallback handling, diagnostics, and Cloudflare/API restriction management in `bob_integration.py`

Results & Impact

Forecast MAE

Evaluated on synthetic demand data to measure prediction accuracy

Inference Latency

End-to-end pipeline speed tested for real-time operator use

Anomaly Precision

IsolationForest evaluated for outlier detection quality

Faster Triage

Bob AI briefs reduce manual analysis time for operators

Reduced Curtailment

Forecasting enables proactive dispatch, lowering renewable curtailment potential

Note: Results are based on synthetic data. Real-world validation and safety constraints remain future work.
